EXPERIENCE

EPAM Systems — *Senior Software Engineer*

August 2020 - November 2022, Szeged, Hungary (hybrid)
November 2022 - Present, Málaga, Spain (hybrid)

- Developed features and took part in shaping the technical direction of 10+ React applications written in Typescript.
- Maintained quality through extensive unit, integration, and visual regression testing.
- Developed a tool for bootstrapping new React applications, reducing setup time from minutes to seconds. The tool ensures consistent project structure across the organization and promotes best practices.
- Updated internal npm libraries to support both CommonJS and ES modules, making them tree-shakeable and reducing application bundle size by over 50% in some cases.
- Decoupled the deployment of frontends from the rest of the stack, significantly speeding up our release process.
- Took part in several education programs as a mentor. Helped less senior team members level up their skills, which resulted in successful promotions.

University of Szeged — *Software Engineer*

2015 - August 2020, Szeged, Hungary

- Worked as a full-stack developer. Had to wear many different hats over the years.
- Participated in all parts of the software development lifecycle from initial negotiations with clients, through defining architecture, to production maintenance.
- Worked on and led the development of several web and mobile solutions, in domains like finance, agriculture, and sport

SKILLS

HTML/CSS

React & React Native

Redux

Typescript

Jest and Vitest

NodeJs

Relational databases (PostgreSQL, MS SQL)

Docker

CI/CD (Teamcity, Jenkins)

Vue

EDUCATION

University of Szeged — *BSc in Business IT*

2011 - 2015
